Privacy Policy

Last Updated: August 23, 2026

This Privacy Policy describes how FOP Tkach Oleksandr ("we," "us," or "our") collects, uses, and protects your information when you use the unified TUWA ecosystem, which includes the main site tuwa.io, the showcase at demo.tuwa.io, the Quasar dashboard at quasar.tuwa.io, the Custom Styles editor at custom-styles.tuwa.io, and our suite of open-source npm packages (Orbit, Satellite, Pulsar, Nova, SIWX).

1. Open Source Ecosystem & Transparency

The core logical layers of TUWA are open-source and publicly available on [GitHub](https://github.com). Our npm packages (@tuwaio/orbit-*, @tuwaio/satellite-*, @tuwaio/pulsar-*, @tuwaio/nova-*, @tuwaio/siwx-*) operate locally in your environment. We encourage you to review our [Documentation](#) to fully understand how data flows within these headless and UI-agnostic modules.

2. Core Principle: Self-Custody

Our philosophy is Purist Web3. We operate on a Local-First and Self-Custody basis. We NEVER ask for, access, or store your private keys. You maintain full sovereignty over your digital assets at all times.

3. Data Collection & Usage

To provide the ecosystem's features, we collect limited, specific data:

- **Registration & Notifications:** We collect your email address strictly for authentication, account management, and sending necessary operational notifications.

- **Web3 Synchronization:** We collect public wallet addresses and transaction metadata to synchronize your on-chain history across devices via the Quasar cloud layer.
- **Billing Information:** If you choose to utilize our paid SaaS features or API quotas, we collect necessary billing and payment information to process transactions and maintain immutable billing histories.

We do not sell your personal data to third parties.

4. API Keys & Infrastructure

We utilize robust RPC infrastructure to process blockchain requests. Users have the option to provide their own custom RPC API keys (e.g., Alchemy, Infura, or custom endpoints). Any custom API keys you provide are strictly encrypted in our database at rest (AES-256-GCM). Only you can view and decrypt your keys.

5. Data Storage and Protection

Most Web3 operations occur locally on your client device using Local Storage (e.g., via the Pulsar engine). Any data transmitted to the Quasar dashboard is protected using industry-standard security measures, including transport layer security (TLS) and strict tenant-isolation policies.

6. Your Rights (GDPR/CCPA Compliance)

You have the right to access the personal data associated with your account, request corrections, and request its complete deletion from our infrastructure at any time. To exercise these rights, please contact us at admin@tuwa.io. Note that immutable on-chain data cannot be deleted.
